PROFESSIONAL SUMMARY

Motivated Data Science and AI/ML professional with 6 months of hands-on internship experience in building predictive systems, data cleansing, and exploratory data analysis using Python, SQL, and Power BI. Skilled in machine learning, deep learning, and API deployment using Flask, with practical project experience in regression modeling and CNN-based image classification. Eager to apply strong analytical capabilities to drive data-backed solutions and insights in a dynamic data science team.

SKILLS

Programming & Query Languages: Python, SQL
Machine Learning & Deep Learning: Scikit-learn, TensorFlow, Predictive Modeling, CNN, Regression (Linear, Gradient Boosting, XGBoost)
Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Microsoft Power BI, Exploratory Data Analysis (EDA)
Deployment & Web Services: Flask, REST APIs
Tools & Environment: VS Code, Jupyter Notebook, Data Cleaning
Languages: English, Hindi, Gujarati

WORK EXPERIENCE

Data Science Intern **June 2025 – January 2026**
Maxgen Technologies | Ahmedabad, Gujarat, India

- Designed and tested supervised learning algorithms for predictive analytics on business datasets, improving baseline workflow efficiency by 15%.
- Executed data cleaning, structural transformations, and exploratory data analysis (EDA) using Python (Pandas, NumPy).
- Developed interactive visual dashboards to communicate core findings, streamlining stakeholder reporting and accelerating data-driven decision-making.
- Partnered cross-functionally with team members to tune algorithmic performance and comprehensively document analytical pipelines.

PROJECTS

Stock Price Prediction

- **Objective:** Developed a regression-based predictive engine to forecast stock market trends using Python, Linear Regression, Gradient Boosting, and XGBoost Regression.
- **Implementation:** Benchmarked predictive performance across multiple algorithms, selecting the optimal framework to minimize error rates based on validation metrics.

Potato Disease Detection

- **Objective:** Built an automated image classifier using Python, Jupyter Notebook, Convolutional Neural Networks (CNN), and TensorFlow/Keras to detect potato leaf diseases for agricultural applications.
- **Result/Impact:** Achieved 97.98% classification accuracy using advanced computer vision architectures and rigorous image augmentation.

EDUCATION

Master of Science (M.Sc.) **June 2022 – March 2024**
Ganpat University, Mehsana, Gujarat | CGPA: 7.25

Bachelor of Science (B.Sc.) **June 2019 – June 2022**
Ganpat University, Mehsana, Gujarat | CGPA: 7.01
